Introducing the SignLink 'Braille Imprint' Range

Product Description

The SignLink braille imprint range of braille pictograms have been moulded from a single piece of polycarbonate. The braille and tactile elements are all raised so that they comply with the building code and the print is on the reverse side of the sign face, preventing it from being scratched off. Being a fully moulded sign none of the braille or raised elements will fall off. This is a major advantage over the traditional braille signs which have individual braille and tactile elements glued to the face of the sign.

The signs have a multi layered construction with the polycarbonate face mounted onto a semi-rigid polyethylene plastic backing plate. The polycarbonate is vandal and fade resistant, making the sign suitable for the indoor and outdoor use. They are supplied with 3M 467 M double sided tape applied to 100% of the back of the sign, ready for installation.

The signs are suitable to be mounted directly to flat surfaces such as gyprock, painted timber, glass etc. If signs are to be mounted onto brickwork or heavy textured surfaces we can supply them with a rigid aluminium backing plate. Signs that are supplied with an aluminium backing are not supplied with double sided tape unless specifically requested.

Signs suitable for medical environments

The product range has been designed specifically for hospitals and medical environments. The one piece sign reduces the risk of bacteria contamination. The polycarbonate face is able to cope with aggressive cleaning regimes.

Availability

All standard pictograms in the range are held in stock, hence we can despatch orders within 24 hours

Pricing

The signs are priced very competitively (market leading prices). We are able to do this because of the method of manufacture and because we make them in large production runs. We believe in passing these savings on to you.

Custom Signs

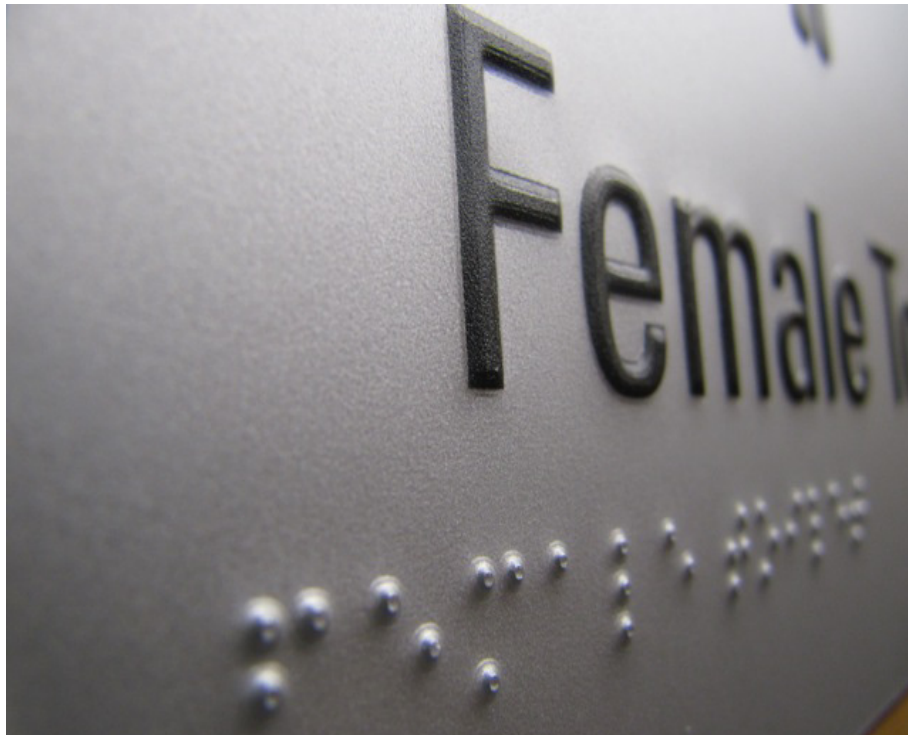

We are able to offer custom pictograms outside our standard range. These signs will be a photo-polymer one piece sign that has a similar look and feel to our standard signs.

Custom Braille Signs

We also offer to make custom braille signs where these custom signs are supplied as part of a set which includes our standard moulded signs. We will produce the artwork so that it matches the style of the moulded sign.

Custom signs will be produced as a photo polymer, one piece membrane. The colour will be sprayed on the back of the sign with the lettering colour to the hot foil stamped on the face of the raised tactile letters and clear coated.

The overall appearance of the photopolymer signs is very similar but not exactly the same as the moulded signs. This should be taken into account if the moulded signs and custom signs are being mounted directly up against each other. The maximum size of the custom photopolymer sign is 600 mm w by 450mm h. They can also incorporate logos and blended graphic symbols.

We also offer braille pictograms on the stainless steel No.4 polish and satin natural anodised aluminium both at 1.6mm thick

Iphone App

SignLink has released Australia's first mobile signage showroom. You can now show your clients signage photos, technical information and 'how it works' videos all from the convenience of your mobile phone.

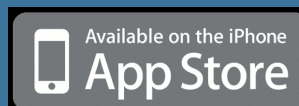

This free to download app is like bringing the showroom to your clients. Products are labelled into categories and is easy for anyone to find their way through.

Presenting to customers has never been easier!

For more information visit www.signlink.com.au
The game has changed, and so should you.

To download the app, simply visit the link below or scan the QR code with your phone.

Did you know we also supply:

Poster Displays

Split Batten Signs

Door Plates

Post and Panel Signs

Ceiling Suspended Signs

Projecting Signs
